Etoile de Hollande

Due to the Greatly Reduced Prices Offered on This Collection, We Cannot Allow Any Changes in the Varieties

K. A. Victoria
For more than thirty-seven years we have been serving the Planters and Gardeners of the Great Southwest, and in that time it has always been our policy to give our customers the best quality seeds, and only such varieties, which we believed would succeed. In order that we may always secure a stock of seed of the very highest grade, we contract for the growing of HARDIE'S Garden and Flower Seeds one and two years before harvest of seed crops.

These contracts are made with the very best growers in many different parts of the world and our years of experience have taught us the best sources of supply; in this respect and for this reason HARDIE'S QUALITY will compare favorably with any reliable seed house of the United States.

There is no legitimate cause for Texans and seed users of nearby States to send to seed houses in far away cities for their seed, as HARDIE'S QUALITY will surely equal the best and our prices are far more reasonable.

Fresh or Pickled—Home or Market—Hardie Offers These as Best

Hardie's Superior Cucumbers

CULTURE—Cucumbers should not be planted until the ground gets warm, unless you are prepared to protect them during the cold storms. Plant in hills 6 feet apart each way, enrich the hills with a quantity of decomposed manure or commercial fertilizer; scatter 8 or 10 seeds on each hill, cover one-inch deep and press the soil firmly over them; thin out to three or four plants to the hill; never allow any of the fruits to ripen on the vine, as they will cease setting fruit as soon as seed commences to mature. 227—Hale's Best—A remarkable, very early, profitable shipping melon from the Imperial Valley in California. The melons are oval-shape with heavy netting and ribs hardly apparent. The flesh is exceptionally thick and firm, of fine flavor, a deep salmon color, with very small seed cavity. It is 10 days earlier in maturing than other shipping types of the Rocky Ford. The melons are 8x4½ inches and weigh 2½ pounds. We have had ripe melons in 68 days in a season remarkable for its coldness. Plant some of this seed for your early melons for home use or shipping. Pkt. 5c; oz. 10c; ½ lb. 36c; lb. 90c; postpaid.

Our stock of onion seed is most complete this season with our usual quality, and we ask customers that are in need of large lots to write us for prices.

CULTURE—To grow fine onions, the ground should be well manured; you cannot get it too rich; they require more or less manure every crop; the land should be well plowed and pulverized before planting; for large onions from the seed, sow in drills about 2 1/2 feet apart, thin out to about six inches in the drills, and keep weeds cleared out. February is early enough to sow; you can also sow again early in the fall for bunch onions.

Large onions can be grown from seed quite as easily and more cheaply than from sets that have been grown a previous season and carried over. Good seed is of the utmost importance. The first cost of this seed is a small item compared with the expense of preparing, fertilizing and cultivation of the soil.

254—A mild mustard with a spinach flavor that can be grown in almost any season of the year, even during the hot summer months. The leaves are cooked and prepared for the table the same as spinach, mustard and turnip and makes greens equal to any of them. Pkt. 5c; oz. 10c; 1/4 lb. 20c; lb. 50c; postpaid.

ONION PLANTS

These plants are rapid growers, will give you green onions within a couple of weeks of good growing weather. Onions produced from plants are usually free from the “hollow center” that usually shows in a matured onion produced from a set. These plants are very slow to run to seed, overcoming another fault of an onion grown from the set.

Home Beautification Is Easy With Hardie's Selected Flowers

Hardie's Superior Flower Seed
PRODUCE BETTER AND BRIGHTER FLOWERS

Do you take pride in your home? Even though it be lowly, you can make it a beauty spot—a delight to you, your family and all passers-by—with the plantings of Hardie's Superior Flower Seeds listed below—all selected from varieties which we know will thrive and blossom best in this section.

Flowers are divided into three classes: Annuals, Biennials and Perennials. Annual flowers grow from seed, blossom and die in one season. Biennials grow from seed, blossom the following season and then die. Perennials make plants from seed the first year, blossom the next and continue to bloom each succeeding year.

CULTURE—A common error in planting flower seeds is covering them too deep; they should not be covered more than twice the thickness of the seed; small seed, such as Portulaca, need only be pressed down with a board or the hand; always press the soil down firmly after sowing, else there is danger of the young plants prying up before their roots can get hold of the soil. Flower seeds generally succeed best in rich soil; some leaf mold out of the woods is good to put on the beds. All prices quoted on Flower Seeds are postpaid.

Hardie’s Field Seed of Quality

YOU CAN PLANT HARDIE’S FIELD SEEDS WITH CONFIDENCE THAT THEY ARE OF SELECTED VARIETIES—THOROUGHLY CLEANED—FREE FROM CHAFF OR WEED SEEDS—HANDLED AND STORED UNDER CONDITIONS NECESSARY TO ASSURE HIGHEST GERMINATION.

Hardie’s Alfalfa

“FOR HAY AND PASTURE”

Alfalfa is a very profitable crop, yielding three to five cuttings per year and being the most nutritious. It is claimed that the feed value of a ton of Alfalfa is equal to a ton of shelled corn. The yield in weight will average five to seven tons per acre. The roots will penetrate to a depth of 15 to 30 feet and it will get plant food where other crops would be a failure.

When once established, Alfalfa is the most valuable permanent clover corn that can be grown, also has the highest feeding value of any clover.

When considering the planting of Alfalfa, it is wise to remember that it is one of the best soil builders. Should you want to plant Alfalfa land in some other crop and destroy the plants, the large roots decay and produce a wonderful source of fertility for the growing of new crops.

750—HARDIE’S FANCY NATIVE ALFALFA—Our supply of seed for 1937 selling is of the very highest quality, truly acclimated to the South. Do not buy cheap Alfalfa seed. If it is cheap it is not good, and mixed with weed seed. Lb. 40c; postpaid. Not prepaid. 10 lbs. $3.50.

751—HAIRY PERUVIAN—More upright growing than our native grown, and especially adapted for the South. Derives its name from the leaves and stems being quite hairy. The crowns are more erect and have fewer stems, which are coarser than ordinary Alfalfa. Grows in cool weather when other Alfalfa has ceased growing. Lb. 40c; postpaid. Not prepaid. 10 lbs. $3.50.

For over 37 years, we have given especial thought and care to the selection of seed corn which would give best results under the varying growing conditions in this section, and by offering only the choicest-tested varieties, we have now become widely known as a dependable source of seed for this most important crop. We offer Northern and Southern varieties.

Some growers prefer the one; others pin their faith to the other. From our 36 years’ experience, we believe that the judicious farmer should mix his crop—planting some of both the early maturing Northern corns and some of the later Southern varieties. The earlier Northern corns often make before our occasional dry seasons set in.

There are a good many factors that determine the yield of corn per acre. Some of these are beyond the control of the grower, but there is one very important factor that every grower can control, and that is the quality of the seeds that are planted. We call attention to the error many people make, when planting corn early, in having it too deep. The deeper you plant the colder the ground is, and especially with soft corns, the seed is apt to rot before the ground gets warm enough to germinate it, resulting in a poor stand. Early planting of corn should be planted shallow to produce an early and good stand.

Hardie's Nu-Green Lawn Dressing

Have a Beautiful Deep Green Lawn

Hardie's Nu-Green Lawn Dressing is scientifically prepared for lawns. It will make your old sunburned lawns have a rich green color. It builds up the root system and gives it that smooth healthy look. Owing to the high nitrogen content it has a tendency to kill out the weeds. Seeds cannot stand much nitrogen. We do not recommend Nu-Green Lawn Dressing for flower and vegetable gardens. Apply broadcast on the lawn when the grass is dry, then water in thoroughly. Use 100 lbs. to a space 50x100 feet. Prices, F. O. B. Dallas: 25 lbs. $1.50; 50 lbs. $2.25; 100 lbs. $4.00.
